Communications of the ACM April 1995

Volume 38 Issue 4

Effective information access involves rich interactions between users and information residing in diverse locations. Users seek and retrieve information from the sources—for example, file serves, databases, and digital libraries—and use various tools to browse, manipulate, reuse, and generally process the information. We have developed a number of techniques that support various aspects of the process of user/information interaction. These techniques can be considered attempts t ...

2 [A survey of Office Automation technology for academic computing centers](#)

4%

Ron Witt

Proceedings of the 10th annual ACM SIGUCCS conference on User services November 1982

At Northwestern University the Personnel Department helps individual departments in studies related to word processing equipment selection. Many departments have acquired standalone word processors from a number of different vendors. The result has been that the specialized word processing needs of departments are being covered. However, universities are not as knowledgeable as industry in applying the new technology. For this reason I've gone to industry to learn how Office Auto ...

1%

Jun Rekimoto

Proceedings of the 12th annual ACM symposium on User interface software and technology November 1999

This paper describes the concept of Time-Machine Computing (TMC), a time-centric approach to organizing information on computers. A system based on Time-Machine Computing allows a user to visit the past and the future states of computers. When a user needs to refer to a document that he/she was working on at some other time, he/she can travel in the time dimension and the system restores the computer state at that time. Since the user's activities on the system are automati ...

4 Linking and messaging from real paper in the Paper PDA

1%

 Jeremy M. Heiner , Scott E. Hudson , Kenichiro Tanaka

Proceedings of the 12th annual ACM symposium on User interface software and technology November 1999

It is well known that paper is a very fluid, natural, and easy to use medium for manipulating some kinds of information. It is familiar, portable, flexible, inexpensive, and offers good readability properties. Paper also has well known limitations when compared with electronic media. Work in hybrid paper electronic interfaces seeks to bring electronic capabilities to real paper in order to obtain the best properties of each. This paper describes a hybrid paper electronic system — the ...
